

THE ONLY CONTINUITY SOLUTION DESIGNED FOR SMALL BUSINESS

Datto ALTO 2 is the only hybrid cloud solution that keeps small businesses up and running through outages, data loss and disasters. This business continuity solution is built specifically for small businesses; you get a compact and powerful appliance that takes snapshots of your servers and workstations, then replicates them to the ultra-secure Datto Cloud, all for a minimal cost.

ALTO 2 uses image-based backup technology, so it takes full images of machines instead of merely backing up files and folders. With this technology you are able to restore systems and entire networks at a moment's notice.

Most small businesses are using at least some type of solution to avoid data loss, but very few are protecting their business from downtime, which can be even more devastating. ALTO 2 will protect your business from data loss and ensure that in the event of a disaster, they are fully operational with little to no downtime.

Introduced in 2013, ALTO revolutionized small business data protection. Datto ALTO 2 represents the next generation and is built on hardware that makes it faster and more reliable.

ALTO 2 packs 1TB of local storage in a slim mini-PC unit that measures only 5 inches square and 1.7 inches tall. Off-site storage is flexible, with 150GB, 250GB, 500GB and 1TB plans, with the option for unlimited cloud storage.

Figure 1

Hybrid Cloud

Datto ALTO 2 utilizes Hybrid Cloud technology to improve redundancy and give users greater protection of their systems and data. Hybrid Cloud continuity is simple in concept yet robust in feature set; it leverages the advantages of local backup and the security of the cloud.

It starts with workstations and servers protecting data locally across the Local Area Network (LAN) to the Datto appliance. From there it is automatically transmitted to the secure Datto cloud. This technology improves fault tolerance while reducing the reliance on bandwidth speed. The local Datto device can act as a restore hub for everything from files to application and system fail over, it can also act as a staging environment for off-site transfer. Scheduling off-site data transfers can be critical for bandwidth management and carries no risk of having unsaved backups. In addition, should the local device be compromised data that was transferred to the Cloud can act as a replica site for the business. A local only backup option cannot ensure data integrity should a site wide disaster occur. (See Figure 1)

Figure 2

Image-Based Backup

Datto ALTO 2 uses image-based backup technology to take a complete picture of the workstation or server. Advantages include quick full system restores, easy recovery of individual files, bare metal restores (BMR) capability, and the ability to boot individual backups as virtual machines. Image-based backup is a superior technology vs. outdated tape and disc. (See Figure 2)

Hybrid Virtualization

Datto ALTO 2 brings the power and flexibility of local virtualization to small business. Hybrid Virtualization technology initializes a virtual machine (VM) in the secure Datto cloud, then automatically connects to the local network through the ALTO 2 appliance on-site using a secure VPN tunnel.

Figure 3

Screenshot Backup Verification

No more guessing if your backup is working properly. ALTO 2 boots backups as virtual machines, capturing an image of the login page to give you visual proof that your data has been successfully backed up.

An industry first. (See Figure 3)

Instant Off-Site Virtualization

ALTO 2 protects businesses from site-wide outages using instant off-site virtualization. In the event of a local disaster like as a fire or flood, the entire network can be recreated in the secure Datto cloud in a matter of minutes. Secure connections are provided to employees and a business can resume normal operations.

Inverse Chain Technology™

Datto's proprietary Inverse Chain Technology eliminates the problem of broken backup chains – the place where most issues arise in the backup process.

Each time a backup occurs data is saved in a universal virtual file format (VMDK). These backups are not dependent on previous snapshots, giving you the freedom to change retention and delete snapshots without resetting the chain or having to take a new base image. Since each backup is a fully bootable virtual machine, there is no need for complex, time-consuming conversion processes before performing a restore. Data is always available immediately, both on and off-site, for near-instantaneous recovery and virtualization. (See Figure 4)

Off-Site File Restore

Brand new for ALTO 2 comes Off-Site File Restore. Now, no matter where you are, you can recover files and folders from any protected server or workstation, from any point in time. The intuitive, familiar Datto Partner Portal now features a simple, powerful utility for browsing the complete file structure for any recovery point. Even better, you can perform searches to find exactly what you need.
